The most striking aspect of working on Green and Health is the approach to finding mecha-

However, we do not live much what is visible. We are constantly learning, and landscape architects have a responsibility to

There could be a role for landscape architects to be more detailed on the use of nature as a tool for health impro-

People are encouraged to go outside and experience nature in an urban setting. It can be a way to escape the

As part of our project, we have a number of goals to achieve. Firstly, we aim to create a forum for sharing

As far as our own project, we produce many pathways along the way. To find the results, we are already

Furthermore, we hope the results of this project will encourage people to bring more nature into their environments.

The role of nature in urban and deprived populations.

It is clear that there is a need for PHENOTYPE project partners and stakeholders from each country, and learning more about the differences and similarities in urban environments in different regions of Europe.

As far as our online project, we produce many pathways along the way. To find the results, we are already seeing examples of making green spaces more accessible to everyone, and policy relating to natural environments in urban planning.

In addition to our own project, we produce many pathways along the way. To find the results, we are already seeing examples of making green spaces more accessible to everyone, and policy relating to natural environments in urban planning.

Peter van den Hazel – Policy Promotion

The policy-promoting activity of working on green efforts is the approval of local food policies which require the benefits of green, blue, white, and orange life. This is a very powerful approach. It is based on making the connection between health and green policy.

One example of such policies is the National Health Service in the United Kingdom and United States, which could be
